

Hi internship seeker !

Are you in search of a cool internship that counts towards your studies, but you are also looking for an unforgettable experience? I set out to do exactly that and more! I wanted to work on flying drones and test them every week or two in remote nature 😎

That search luckily brought me to SPOTS: an organisation of enthusiastic volunteers who are using and developing the latest technology to protect the wildlife of Africa!

When I had been selected by them to work on automating the landing of their surveillance plane, I flew down into Johannesburg (South Africa). SPOTS picked me up from the airport and brought me right into the Dinokeng Game Reserve.

That is where my work base for the next 4 months was going to be: surrounded by rhinos, and giraffes, and hearing the lions, hyenas, and jackals howl at night! 🐘

Mechatronics/electronics/aerospace

Sounds too good to be true? SPOTS is looking for more interns to help them protect wildlife! Text me on WhatsApp (+49 1525 9659963) or email my supervisor Javier Alonso-Mora (alonsomora@tudelft.nl) for more information 😊

All the best,
Georg
